With that on rest for some time, let's grab a few chunks of information about Classic editor vs Gutenberg editor.

## **What's The Difference Between The Classic And Gutenberg Editor (Block Editor)?**

Speaking about the classic editor, this was the platform for new content creation for websites for many years. It included one large area where you can add text, images, and other media files to prepare content for your site.

The major drawback of the Classic Editor was some elements like content columns and tables that required a few lines of codes or plugins to perform the actions. This made the publishing process unnecessarily more complicated and time-consuming than what it should be.

To address this issue only, the Block Editor was designed. This particular editor features blocks that can be used to create content for WordPress websites. Each block contains a particular type of content that could be anything among a paragraph, an image, a table, a list or any other element that you want to add to your post or page.

Simply understand, it is easy to create more complex content with blocks without the need to touch even a single line of code. Just so you know, each of the blocks in the editor has individual settings, using which you can customize specific elements. In addition to the connection, you can easily change the positions of the content on the page to create columns or other layouts.

As far as users' perspective goes, the Classic Editor is simple to use between both options. Do you know why? Because it has a vision-friendly interface. That means Classic Editor has just one field where all your content is accommodated as opposed to several distinctive blocks in the Block Editor. However, the Block Editor is created keeping ease-of-use in mind and it can be more user-friendly as well, especially for new users of WordPress.

## **Editor Support**

As you might be well-informed of the fact that the Gutenberg editor was released with WordPress 5.0. After its launch, there was a thin air of uncertainties around, leaving all web professionals concerned about how to approach both new and existing websites. But the good news is that the Classic Editor is still available for users in the plugin form. This makes it easy for website administrators to keep their site as it is for the time being.

Not just now, you can be assured of its presence for a few years from now since it is scheduled to be supported till 2021. And it's quite possible that throughout this period its number of users will increase drastically.

Knowing that there are still a few years of Classic Editor's existence, it may not be a bad idea to use it when building a brand new website. At least, you can consider it in some specific situations.

## **When Should You Approach a Classic Editor?**

While I can say this without a doubt that the newer editor is the future of WordPress, having a choice to utilize the editor in the desired way enables users to mix and match different styles. Right below we have listed out some cases in which sticking the Classic Editor makes more sense. Have a look at it and think yourself:

### **1. To Customize The Back End**

Currently, one of the major issues with Gutenberg Editor is that it doesn't work well with the custom WordPress meta boxes. That doesn't impart a good feeling at all since meta boxes are widely implemented and have been extremely useful over the past few years.

They tend to be shifted to the bottom of the screen and look like it's not properly placed or disarranged. This might make you a bit frustrated if you have been a user of Advanced Custom Fields or a similar plugin that helped you to create a custom UI for your pages.

So, if you want to build a heavily customized site, going for the Classic Editor will be a much better choice since it offers a nicer visual experience. When you will start using it, you will find it's easier to hide unwanted page elements, leading to a more intuitive experience for content developers.

In case you doubt the features, functions, or operations of custom websites, we can clear it all in one swoop if you give us a

chance. With extremely creative and innovative designers, our Los Angeles web design company can work with its maximum potential to bring surprising results to your company. We can assure you of a great service if you trust us for custom web design and development, custom plugin development, theme design, internet marketing, social media marketing, PPC, SEO and a lot more.

## **2. To Utilize A Page Builder**

If you are not certain about the picture, let me tell you that if your site uses a page builder plugin or a theme with page builder functions, you may find that using Gutenberg is a redundant choice. Moreover, there is also a chance that it may not play so nicely with Gutenberg or work at all.

Just for an example, the older versions of Visual Composer plugin that consists of multiple commercial themes isn't compatible with Gutenberg. Of course, you might say why would anyone use outdated variants to get the job done? But, anyway if you want to use Gutenberg, make sure the Classic Editor is installed alongside to deal with any sort of issue.

## **3. To Deliver Clients A Simple Yet Beautiful Layout**

Maybe the new block editor would be the best option for creating more compelling content, perhaps not everyone will need that advancement.

In this case, the Classic editor is more than enough to create amazing content. Just think this way, why can't we continue with what we are already used to or comfortable with instead of being forced to adapt to modern features or functionality. While this situation might last anytime soon, you can at least delay the urgency of Block editor usage for a few years.

If you have got our message neat and clear, it's time to get to work. And if you don't want to, leave it to us. With past masters in the design and development industry, we will create visually-arresting content for your site that will be above par as compared to your competitors. We have been offering excellent customer service to clients across the globe over the years and now our next turn is to serve you. The design and marketing team at our Los Angeles web design company perform various tasks exceedingly well such as ecommerce web design and development, shopping cart development, website testing and optimization, email marketing, search engine optimization, and a whole lot more.

## **Usability of Classic And Gutenberg Editor**

Sometimes you might get into a situation where using the Classic editor in specific areas of your site seems to be helpful. Like the one mentioned above customized backend tasks of your site. So, if you have some custom fields that have to be added to a few pages or post types, you have the option to carry out some experimentation with editors to check out which fits your needs best.

Optionally, the classic editor will allow users to switch between the editors to let them make the most out of it. This is a good solution and if you want to gain a little more control over the Classic editor, what you need to do is make use of the free Disable Gutenberg plugin. This will provide you a lot of flexibility since you become able to disable Gutenberg on anything just from a single page to all post types or pages. This means if your site can harness the functions of a new editor except specific situations, you can still do that.

However, it's important to mention a point here for you all if you decide to install the Disable Gutenberg Plugin. When you will bring it into effect, the plugin will remove the front-end styles by default that comes with Gutenberg. If you are still planning to use it, you just need to go to Settings > Disable Gutenberg and click

the link right below the “More Tools” title. Then, check the option saying “Enable frontend Gutenberg styles” that will in turn allow you to use both editors nicely.
